

ORIGINAL ACCESSORIES

Bang & Olufsen

May we take this opportunity of thanking you for choosing a Bang & Olufsen product - one of the most prestigious in home electronics today.

Every Bang & Olufsen product is built with your optimal viewing or listening comfort in mind and the original Bang & Olufsen accessory programme adds a variety of options for easy operation and practical, elegant placement.

When looking through these pages you may find an accessory that will enhance your experience with your new Bang & Olufsen product.

May we also suggest that you keep this brochure for future reference.

*Welcome to the fascinating world of
Bang & Olufsen.*

The Bang & Olufsen Terminals

Beolink 1000, Beolink 5000 and Beolink 7000 are your keys to all the magic in Bang & Olufsen's products. For full enjoyment of the operating ease that comes with these terminals, we have designed individual placement options. The choice is yours.

1.

2.

1. Beolink 1000 Wall bracket

Holds your Beolink 1000 terminal when you are not using it. You can of course operate it with one hand in this position.

2. Beolink 5000 Wall bracket

Ideal for neatly storing your Beolink 5000 terminal. Due to the double display and operating keys on both sides, the terminal must be hand held when in use.

3. Beolink 7000 tabletop holder/ recharger

Comes with the Beolink 7000 when you purchase it. The terminal can be used while in this holder.

3.

4.

4. Beolink 7000 Floor Stand

Combines flexible placement and recharging. Can be adjusted to the exact height of your favourite chair, for optimum use.

The Bang & Olufsen Furniture

Bang & Olufsen's furniture has been especially designed with home interior products in mind so that all the wiring is hidden away in a cable management system. Strong construction and choice materials ensure that the units are durable, pleasant to the touch and easy to clean.

Attyca 2

The larger of the two Attyca furniture modules, built for Bang & Olufsen's sound and picture systems as well as for a selection of the tapes, records and videos you want close at hand.

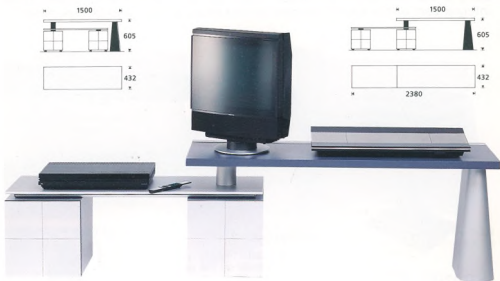

Attyca 1

Both aesthetic and practical in its basic idea. Hidden wiring adds to the overall impression of Attyca's elegance.

Attyca 1 and 2 can be placed together to give you the total entertainment hi fi, video system in one unit.

F 1000 is a whole new concept for your stereo and video system. A compact and integrated unit that opens into several positions giving you the freedom to use it in different configurations but always keeping the wiring from view.

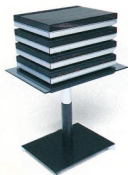

F 1000 comes with two cubic storage units, with the option of adding extra cubes. Each cube has an adjustable aluminium laminated shelf, but

you can plan the final layout as the cube can be fitted with optional metal trays with custom made aluminium profiles for storing CDs, music or

video cassettes. The cube which holds the hidden wiring is particularly well suited for storing LPs.

The Bang & Olufsen audio stands

Bang & Olufsen naturally includes stands and other placement options as an integral part of the overall concept for our music systems and loudspeakers.

Beosystem 7000

Elegantly displayed and easily accessible on its special stand. Available in black and white.

Beosystem 4500

Looks fantastic when you hang it vertically on the wall. The receiver, CD player and cassette recorder share a bracket on one long line, while the turntable has a horizontal wall bracket.

Beosystem 2500

Comes with a bracket which allows you to hang the complete system on the wall. Handles make it easy to lift Beosystem 2500 off the wall

again, if you want to carry it with you.

Beocenter 9500

Can be placed on a black stand designed to visually support its long, low lines.

RL loudspeaker

Placement is flexible and allows you to control the sound reproduction. The most neutral sound is when RL is mounted on a floor stand or suspended from the ceiling

away from the wall. When RL is mounted on the wall, placed on the floor or suspended in a corner, there is a more pronounced bass lift. You are free to place your RL speakers in a

vertical or horizontal position. Please note: The smallest of the four RL speakers is primarily intended for use on a bookshelf, on the wall or on the floor.

Beolab/Beovox 4500 Panel loudspeakers

Designed to hang on the wall like works of art. For both Beolab and Beovox there are two different cable covers. One with a stainless steel sur-

face that matches the loudspeaker, or in white plastic

which can be decorated to match the wall decor.

Beovox Cona

Gives small loudspeakers a bigger sound. If for example you want to use your Beovox CX loudspeakers in a larger room, you can strengthen the

bass by connecting a Beovox Cona subwoofer.

The human ear cannot hear the direction of bass tones, so you can place the Beovox Cona wherever you like. Cona is available in white, grey or black.

Other Bang & Olufsen Specials in the range

Bang & Olufsen pays particular attention to the smaller things in life, right down to the range of MMC cartridges.

Beosystem 2500 options

Beosystem 2500 is the best dressed sound system ever. The colour scheme lets you choose the exact loudspeaker fabric you want: cobalt, grey, black, white, cerise or jade.

You can have a Radio Data System (RDS) decoder built into your system 2500 then the display can show from which frequency you are receiving. Also you can give more personal names than just the frequency code to 30 stations, and special RDS news bulletins are given preference over the programme you are listening to.

Bang & Olufsen headphones

Headphones are for people who want to concentrate on good music - Bang & Olufsen offers you the choice of two

headphones. Form 1 varies its shape to fit the head wearing it. Ultra light Form 2 weight only 68 grams; either can be used to listen to sound system as well as TV.

The Bang & Olufsen Beolink concept:

You can operate your Bang & Olufsen music system and video system from anywhere in your home, regardless of the room in which your equipment is located.

Bang & Olufsen's three X-tra kits make Beolink installation very easy.

All you need to do is run a discreet cable to as few or as many rooms as you like and connect your extra units or speakers using Bang & Olufsen's simple and easy X-tra kits.

Installation is very straightforward. All your Beolink communication is performed via your Beolink terminal and a

Link "eye". So to add extra speakers, you simply use an X-tra sound kit, mounting the small eye on the wall in the Link room. This way you gain full access to sound from both your music and video system located in the living room. An X-tra Active sound kit will give you full programming control on top of

this. Adding an extra Beovision MX requires no electronic eye — one is already integrated into the television. All you need is the X-tra TV kit, plus of course, Bang & Olufsen's unique A/V cable which is the "umbilical cord" through which your Bang & Olufsen audio and video systems communicate.
